DENTAL IMPLANTATION AND TECHNOLOGY

Nova Science Publishers Inc. Hardback. Book Condition: new. BRAND NEW, Dental Implantation and Technology, Paul A. Williams, Dental technology is changing rapidly. With new materials and techniques to work with, these materials are gaining clinical acceptance. Such new technologies are CAD/CAM or electroforming. A dental implant is an artificial tooth root replacement and is used in prosthetic dentistry to support restorations that resemble a tooth or group of teeth. There are several types of dental implants. The major classifications are divided into osseointegrated implant and the fibrointegrated implant. These implants form a structural and functional connection between the living bone and the implant. A variation on the implant procedure is the implant-supported bridge, or implant-supported denture. This new and important book gathers the latest research from around the globe in the study of new dental technology and dental implantation and highlights such topics as: dental implants in oral cancer patients, placing and loading implants, and considerations of graft materials in maxillary sinus augmentation procedures and others.
